

Jacto CD-400

Manual Backpack Sprayer 4-gallon

THE ULTIMATE MANUAL
COMMERCIAL SPRAYER

ORIGINAL ACCESSORIE ECOVALVE

The addition of our labor and chemical saving 22 PSI ECOVALVE “yellow” will really save landscapers from one of their biggest hassles with “less-commercial” sprayers. Simply, they will never have callbacks to fix the damage caused by a sprayer leaking herbicide onto a customer’s lawn.

ECOVALVE keeps pressure and flow constant even while pumping the backpack sprayer, reducing application volume by up to 30% and improving the coverage on the target.

4 different pressure ECOVALVES are available to work within the pressures and flow rates recommended by the nozzle manufacturer.

Extreme toughness and maximum resistance to abusive chemicals.

Jacto’s 4-gallon (16-liter) CD400 has long been a popular choice among farmers, landscapers, construction crews and others who need extreme toughness and maximum resistance to abusive chemicals. Now you can choose both the CD400 (white/orange) and the PJ16 (blue/orange). In independent tests, the CD400 and PJ16 exceeded more than 2,500 hours of continuous operation without breaking down. Both models are fully convertible for either right- or left-hand operation.

FEATURES

- Dual Viton® Piston Cups
- Internal mechanical agitator for constant mixing.
