Quick Reference Guide

B58 Forage Boxes

Numerous Configurations Available

- Available in 19', 22' & 25' models. Front unloading, rear unloading and combo box configurations means there is a box to suit any type of situation on any type of farm.

No Weld Construction

- No weld construction means a box that stands up to the flex and torque produced by today's high capacity harvesters and high velocity tractors.
- Tie rods for prolonged longevity, can be retightened over time to maintain structural integrity.

Quick and Safe Unloading

- With a standard hydraulic rear unload speed of 19 ft/min, unload into bunk silos as fast as a dump trailer but more safely.

Tons of Options

- In-cab hydraulic controls for front unloading and combo boxes. Unload and get back out to the field without ever leaving the cab.
- Receiver kits for top loading and High Dump boxes.
- 18" conveyor extensions for increased maneuverability around the silo.
- 18" side extensions available.
- Optional roof.

Truck, Trailer or Wagon Mounted

- Truck mounted kit. *(Optional)*

2026 US Dealer Price List

B58 FORAGE BOX

Standard Equipment:

- Oil bath gearbox for beaters and cross conveyor drives.
- Heavy-duty bronze gear reducer driving main apron with variable speed belt drive.
- Operator station located near discharge station.
- Independent feathering clutch for cross conveyor and safety release.
- Three 18” diameter, uniquely designed beaters, providing uniform material discharge.
- CA-500 roller chain for 22” wide conveyor.
- Uniquely constructed, completely bolted structure made from high strength steel with saddles & wear plates, tie down chains, galvanized aluminum (Galvalume™) steel sides & rear door.
- All bolted steel side structure with unique transversal tie rod from post to post.
- Section assembly of roof.
- Transport lights.
- Clean out panel for cross conveyor.
- Left or right discharge configuration.
- Grease hoses for ease of maintenance of beater bushings.
- Tie down chains. Safety cables (emergency stop) on both sides.

B58 Specifications			
Unloading Configuration.	Combo Box & Rear Unload (22’ & 25’ Only). Front Unload (All Sizes).

2026 US Dealer Price List

Quick Reference Guide

860 & 860HO Forage Blowers

Two Different Models:

- 540 RPM direct drive (860)
- 1000 RPM (860HO)
 - 650RPM at fan increases blowing capacity by 20%

8 Blades are Better than 4!

- The eight blade 860HO blower turning at 650 rpm generates 30% more blade passes per minute than a four blade blower turning at 1000 rpm.
- An eight blade blower distributes wear more evenly than a one with four blades so you are not replacing wear parts as often.
- Eight blades are easier to balance than four, resulting in less vibration.
- With eight blades, there is less crop pickup up per blade but more crop over all, with less torque spikes and less vibration.
- A high inertia in the Dion 860 & 860HO reduces torque spikes on tractor, resulting in less chances of clogging from a drop in PTO rpm and is less demanding on the tractor.

Largest Auger on the Market

- The 14"Ø (14" pitch) feeding auger is the largest on the market.
- Augers are more effective and energy efficient than spinners for feeding.

Reduce Wear on Your Tractor

- All Dion blowers come standard with an overrunning clutch. This protects the PTO brake of the tractor.

Heavy Duty Construction

- The 860 & 860HO are equipped with heavy duty cast iron pulleys and completely double belted.
- All bearings are high quality NTN (no cheap Chinese bearings in the unit).
- No rotation disk inside the fan. The shape of the paddles eliminates the need for this.
- Large frontal adjustment / cleanout door.
- Heavy Duty angle iron blower arms.
- Heavy Duty PTO.
- Hydraulically Adjustable Heavy-Duty Wheels & Tires for ease of adjustment & transport.

2026 US Dealer Price List

860 FORAGE BLOWER

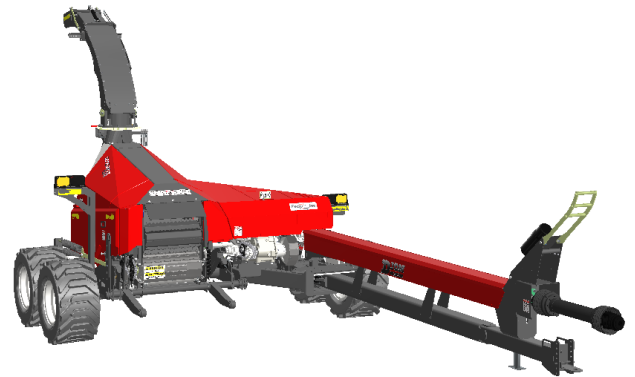

- Legendary DION HD Forage Blowers.
 - 59" Diameter Fan with 8 HD Blades.
 - Double Belt Driven. Cast Iron Pulleys.
 - Over Running Clutch. Heavy Duty NTN Bearings.
 - Double water inlets (Band & Auger), Choice of Driveline & Auger.
 - Hydraulically Adjustable HD Wheels & Tires.
- *** Minimum recommended HP required: 1HP per foot of silo. *****

- 14"Ø (14" pitch) feeding auger.
 - More efficient than our previous 14"Ø (10" pitch) auger and equal capacity of our 16"Ø (16" pitch) auger.
- Discharge spout thickness increased to 11 ga. (previously 14 ga.) for better wear characteristics.
- Blower band now in 2 sections with reversable wear plate section made from Hardox 450.
- Large vertical hopper extension.
 - Offers better wind protection and accepts silage from boxes sitting on higher trailers.

ARTICLE	DESCRIPTION		SUGGESTED LIST PRICE (USD)
	RPM	AUGER DIAMETER	
860	540	14"	\$21,115.00
860HO138	1000 (Fan @ 650 rpm) 1 3/8-21 Spline Yoke	14"	\$23,740.00
860HO134	1000 (Fan @ 650 rpm) 1 3/4-20 Spline Yoke	14"	\$23,900.00

2026 US Dealer Price List

Quick Reference Guide

The next generation of Dion Harvesters!

Scorpion 300

- 300 hp rating
- Mechanical feedroll drive – 2 LOC ranges - 2 cutterhead options
- Electro-hydraulic controls – New control box

Common Standard features:

Industry Exclusive Straight Through Design

- The most energy efficient PTFH available.
- Crop is accelerating at each stage of the process.
- No energy is wasted by having to re-accelerate after changing directions unlike competing PTFHs using cross augers. The competition's crop changes direction multiple times in the chopping process, therefore wasting energy.

1033 RPM Cutting Cylinder Speed

- The cutting cylinder turns **1033 rpm** vs the closest competitor turning 850 rpm. This results in 21.5% more cuts/min & greater capacity.
- Industry exclusive, forward sharpening process requires less time, draws sharpening heat away from knife tip & provides optimal cutting edge shape.

Total Shear Technology (τστ) Kernel processor (KP)

- A **67% ratio** between the upper and lower processor rolls is the highest in the industry.
- Creates a higher feed value in the silage by opening up the kernels and increasing effective fiber.
- By using a high surface speed ratio rather than a large crushing force there is less wear on the high speed KP bearings.
- Roll gap adjustment is done by tightening or loosening just two bolts in mere seconds.
- Replaceable 45mm (~1.75") shafts and oversized, premium 45mm (~1.75") spherical roller bearings.
- 5 teeth/inch serrated processor rolls that are dynamically balanced.
- ¾" wall thickness with high hardness (55RC) heat treatment for longevity.
- Disabling the KP can be done in 30 minutes and with one single ¾" wrench. The top roll slides out of the harvester so the crop flow is always straight through.

2026 US Dealer Price List

Quick and Simple Daily Maintenance:

- **One side one bolt** shear bar adjustment: An industry exclusive. Shear bar is adjusted in seconds using just one (1) bolt.

STINGER spout option

All models “Stinger Ready”

- No modifications required
- Quick installation and conversion
- Dealer/field installed kit

Designed for Side Loading

- Reaches a maximum height of 19ft. (5.8m).
- 330° of rotation & enough horizontal reach to chop left, right or straight back.
- Wide angle day & night camera with 7” in-cab, color monitor is standard.

Electro-Hydraulic Controlled

- Electro Hydraulic controls for rotation, height and deflection are all integrated.

Integrated Suspension

- Hydraulic accumulator suspension creates a smooth ride in the field and on the road.
- No bulky supports to install.
- Folds down to less than 3m for road transport and storage with an incorporated ‘auto-lock’ system.

Heavy Duty

- Hardox and Domex abrasion resistant liners are accessible from the top for simple replacement.

2026 US Dealer Price List

High capacity base model

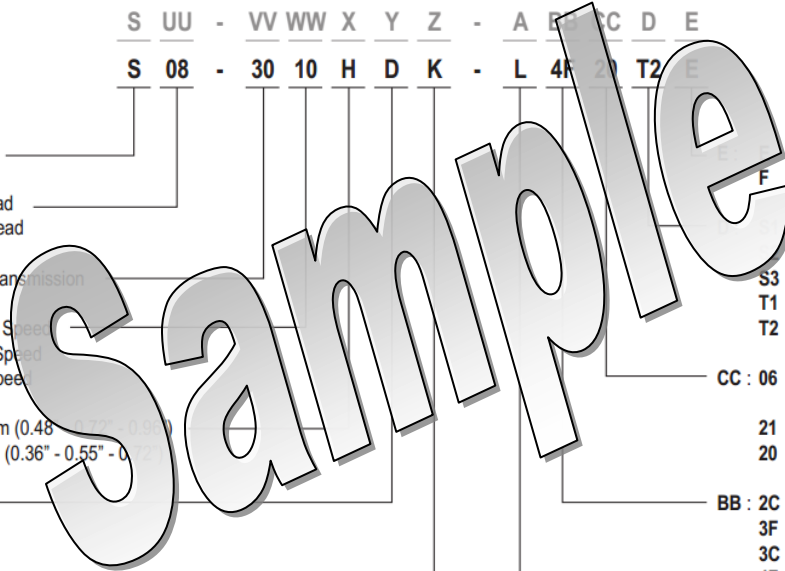

- Forage harvester rated for up to 300 pto hp.
-  Metal detector with self-calibrating **SMT** (*Smart Threshold Technology*).
- Heavy duty 1000 rpm drive line with hd gear box.
- 24" wide cutterhead, 22" diameter – **1033 rpm**.
- Cutter head shear bolt protected with over running clutch.
- Radial pin clutch for top and bottom feed rolls.
- Knife sharpener with 3" diameter stone. (cutter head is sharpened in forward direction)
- Electro-hydraulic functions:
 - F-N-R shifting
 - Spout (raise/lower)
 - Spout rotation & déeflector
 - Tongue swing
 - Header raise & lower
- Long tongue for dual wheel tractor.
- Quick, one side shear bar adjustment.
- Reversible tungsten carbide edge shear bar.
- Abrasion resistant blower housing.
- Replaceable spout liner. Made from ¼" *Hardox*.
- Adjustable axles height & tread width.
- Fixed wagon hitch.
- Adjustable attachment flotation height.
- Led transport lights.
- Tool box equipped with: safety glasses, drive chain for attachments, 3 loc sprockets & safety chain.
- Two processor rolls.
 - One 6" diameter and one 10" diameter.
 - The 67% speed difference shearing action between the processor rolls (**τστ**) uses less power than regular crushing action.
 - LHS removal of top roll for hay operation (≤ 30 mins & stores onboard).
 - Quick and easy adjustable roll spacing depending on crop condition.
 - Roll drive – 6 double AA V-belts.
 - 4 industrial high speed bearings.

Quick Reference Guide

F71 Hay Pick-Up

9 Ft (2.74m) Pickup

- 99 ¼" (2.52m) tine to tine width.
- 108" (2.74m) effective width.

5 Bar Pickup

- A 5 bar pickup reel in the F71 generates an even flow of material to the harvester.
- 34 tines/bar.
- Effective in from heavy to light windrows.
- Competitors only offer 4 bar pickup reels.

Large Auger

- 22" diameter auger for high capacity feeding.

Integrated Overload Protection

- Star Ratchet Clutch protects the unit from overfeeding.
- No shear bolts.

F46 Hay Pick-Up

7 Ft (2.13m) Pickup

- 75" (1.91m) tine to tine width.
- 84" (2.13m) effective width.

5 Bar Pickup

- A 5 bar pickup reel in the F46 generates an even flow of material to the harvester.
- 26 tines/bar.
- Effective in moderate & light windrows.
- Competitors only offer 4 bar pickup reels.

Large Auger

- 20" diameter auger for efficient feeding.

Integrated Overload Protection

- Star Ratchet Clutch protects the unit from overfeeding.
- No shear bolts.

Quick Reference Guide

Rotary Corn Heads

Available in 2 different sizes

- Dion-Ag offers the **largest** pull-type corn head on the market. The F61-120" (4 row equivalent @ 30" rows). Also available for self-propelled harvesters as the F63-120".
- Dion-Ag also manufactures the F64 - 90" (3 row equivalent @ 30" rows) corn head.
- Dion-Ag also offers interchangeable, "plug and play" adapter kits available for most brands of pull-type harvesters.

Row independent

- Harvest with or against the direction of planting. Harvest any width of rows and twin planted corn without any modifications or adjustments.

Even Feeding & Energy Efficient

- Dion-Ag's patented conveyor chain system provides a consistent flow of crop to the harvester while requiring 30% less energy to run than a conventional row head.
- No auger design.
- Feeds the stalks perpendicular to cutting cylinder for consistent LOC and best chop quality.

Low Maintenance

- Low maintenance machine, daily lubrication and a simple chain tension verification is all that's needed.
- Knives are tungsten coated for extended life & create a self-sharpening wear pattern.
